

For Immediate Release

Tadiran Demonstrates VoIP Security and IP Telephony Solutions at ISC East, September 11-12 in New York

State-of-the-Art Mobile Training Vehicle Lets Attendees Experience the World of IP Communications and VoIP Security

Port Washington, N.Y. – September 10, 2007 – Tadiran Telecom[®], a leading global IP business telephone and communications solutions provider, today announced plans to demonstrate its VoIP (Voice Over IP) Security and IP Telephony solutions at ISC East, September 11-12 at the Jacob Javitz Convention Center in New York, booth #855.

Tadiran will also debut its MTV (Mobile Training Vehicle) at the show, allowing show attendees to experience and test the possibilities of IP communications, first hand. The MTV is outfitted with Tadiran's state-of-the-art telecommunications solutions.

Tadiran Telecom's V.P. of Marketing Pat Lennon said, "We're excited to bring our Mobile Training Vehicle to ISC East for the first time. It's a unique solution that allows us to showcase our products and offer training to customers. We simply roll the vehicle to our customer's offices, and they reap all the first-hand benefits of testing and training on our innovative VoIP Security and IP Communications products."

At ISC East, Tadiran also plans to demonstrate its newly launched Coral[®] Sentinel Pro product (see separate release today), which allows Tadiran's VoIP business telephones to work anywhere, without sacrificing an organization's data security.

Lennon continued, "Our products allow businesses and organizations of all sizes to migrate to the world of IP in stages, all while continuing to leverage existing network and legacy investments, and without risking data security issues. We're especially excited to be demonstrating our Coral Sentinel Pro at this show, as it showcases our technical prowess when it comes to VoIP security. With our unique Session Boarder Controller unit, our customers can rest assured that their data will not be compromised during VoIP calls."

Aboard the MTV at ISC East in booth #855, Tadiran will demonstrate the following VoIP Security and IP Telephony solutions:

- The Coral Sentinel Pro, Tadiran's newest product, is a SIP-compliant Session Boarder Controller (SBC) unit that enables the connection of remote IP Tadiran business phones located behind NAT (Network Address Translation) servers or firewalls. The Coral Sentinel Pro removes VoIP security issues by transferring signals and RTP traffic through the firewall or NAT server to the relevant endpoints in the LAN network. With Coral Sentinel Pro, no permanent channels are opened up to transmit and receive calls, ensuring the organization's data is secure.
- Tadiran's award-winning family of Coral IP PBXs offer a range of telephony solutions that facilitate a seamless move to VoIP, with no loss to investment in legacy systems or the need for extensive retaining. The Coral IPx family includes a breadth of products that combine leading edge VoIP capabilities, voicemail,

conference bridge and cell phone integration, allowing cell phones to act as extensions to the system. Each model can be used as a VoIP telephony server with gateway and digital telephone options. The Coral IPx family offers the best total cost of ownership, backed by superb voice quality, easy installation and maintenance, secured communications, and a wide choice of user devices to support tele-workers, corporate and branch offices, and road warriors.

- The Coral IPx Office is Tadiran's small office IP PBX solution. It is a complete IP office communication solution in one small box, for simple, flexible converged communications with sophisticated call handling, firewall protection, VPN (Virtual Private Network) and NAT support, and optional unified messaging. It offers an extensive range of IP functionality and user benefits such as a built-in data switch optional Internet router and a large selection of gateways to legacy connections. The Coral IPx Office can also be networked, giving branch offices the same communication services enjoyed by the head office.
- A preview of Tadiran's newest innovation, the Coral Sea Softswitch – a complete, pure IP VoIP solution for all size enterprises (currently in beta). The Sea Softswitch, based on open technology standards, is a single, replicated, fault-tolerant VoIP solution, requiring only 1 RU (rack unit) of space, but with far greater capabilities than much larger systems. As an independent system, or integrated with existing systems and endpoints, the Sea Softswitch connects between endpoints, protocols and media gateways. This provides full feature functionality of voice, video, SIP-based unified messaging, multimedia and Contact Center capabilities.
- Mobility applications. Tadiran's FlexiCall™, Freedom™ and FlexAir™ applications enable employees to be reached through one number, making it easy for them to receive important calls and timely messages. With FlexiCall, your landline and mobile phone ring simultaneously, allowing employees to never miss a call. And once they get the call, they stay in control of it with the ability to transfer the call into the office, or page someone, from their mobile phone. FlexAir allows full mobility within the office building or campus using DECT wireless, while avoiding airtime costs. With Freedom, businesses can provide access to internal system services – outgoing trunk access, voicemail, conferencing and internal calls – to distant and cellular phones. Employees dial into their own phone number and access all their user-defined system capabilities, enabling them to take advantage of lower corporate GSM gateway tariffs.
- Unified Messaging systems that consolidate voice messages, emails and faxes into a convenient Microsoft® Windows® browser-based platform. Tadiran's Unified Messaging systems are designed specially for the telephone system, offering the most seamless integrations. The systems fit into the telephone chassis, requiring no external resources.
- Tadiran's Composit™ Contact Center is a comprehensive suite of real-time, IP multimedia customer interaction management solutions. Its scalable and modular system combines IVR, Dialer, CTI, queue management, Intelligent Interaction Routing and multimedia management – all on a single, distributed platform. Composit's distributed architecture allows multiple Composit servers to tie together and work as one single system, so agents across different servers can connect and share data, and businesses can expand the number of agents and IVR ports, conduct automatic load balancing and disaster recovery.

About Tadiran Telecom

Tadiran Telecom® has been an established innovator in telecommunications for more than 40 years. A leading, global IP business telephone and communications solutions provider, Tadiran serves businesses and organizations of all sizes with a comprehensive family of products, including IP PBXs, contact centers, IP telephones, and mobility and desktop applications.
