

Application – Ship-builder and ship communications

Products Used – Coral IPx, Coral Sea Softswitch

Details – Coral IPx connecting offices and shipyards, and vessels, FlexSet IP Telephones

Connecting every corner of the World with VoIP

71% of the earth's surface is covered by water, a perfect place for Tadiran's VoIP Mobility Solutions

Edison Chouest Offshore builds, services, and operates specialty vessels for some of the world's largest organizations. Their high-tech fleet and ability to provide specialty vessels has enabled them to triple in size in the last ten years.

Tadiran Telecom Partner Global Communications, LLC recognized how Tadiran's VoIP solutions could provide instant and seamless communications to better the Chouest offering. Global started by installing fourteen Coral IPx systems in the corporate headquarters and shipyards. "Next we starting networking in the remote sites," said Global Managing Partner Amy Burke Freeman. "The only difference is that the remote sites are floating in every ocean in the world! The satellite communications to the ships are some of the clearest VoIP conversations I have ever heard." Now land-based employees can dial the ships as if they were an extension down the hall. And the crews abroad can dial their families back home using PSTN connections from the home office.

Global Communications has installed Coral IPx systems in each office and shipyard. The plan is to equip each new ship as well as every ship in the fleet as it comes to port for maintenance. The opportunity turned into the dozens of Tadiran systems and thousands of IP telephones and is a terrific example of the power of Tadiran's VoIP.
